

GREEN MANUFACTURING

MAKING A CASE TO PRESERVE THE PLANET.

Green manufacturing isn't a reality – it's an actuality at Refcon. We are leading the way to reduce the carbon footprint of our products. As part of our efforts, we have become the only large-scale manufacturer able to supply refrigerated cases, displays and counter units certified to Forest Stewardship Council (FSC) standards. Nor, do we use environmentally destructive glues or solvents. That means if you select this option, our cabinet structures, veneers, millwork, counter surfaces and entire units are warranted to have remained within the FSC's "chain of custody" at all times. Steps and time we believe are worth the extra effort.

10% total recovered fiber/all post-consumer fiber. This paper is acid free, archival quality and meets EPA and FTC guidelines for recycled coated papers. All the pulp manufactured or purchased is elemental chlorine free (ECF) or totally chlorine free (TCF).

KEEPING SALADS AND THE PLANET GREEN.

Presenting and preserving food is what we do. However, preserving the planet for future generations is a responsibility we take seriously and so do our customers. Working together, we are committed to supporting renewable and sustainable practices throughout the foodservice industry.

It's not the path most traveled, but we are proud to undertake the extra work and expense of separately storing and specially handling of FSC-certified woods. We welcome the periodic inspections by personnel from the FSC-approved Scientific Certification System. Our facilities are completely open and all of us are completely supportive of the FSC. But, we don't stop there. We strive to engineer and produce refrigerated cases that reduce energy consumption, noise pollution, and are carbon neutral.

If you want to learn more about FSC and how these standards will impact the environment, we encourage you to visit www.fsc.org.
